

Intro to AI and Application to Business(Fall 2025).

PPart 1. Embeddings

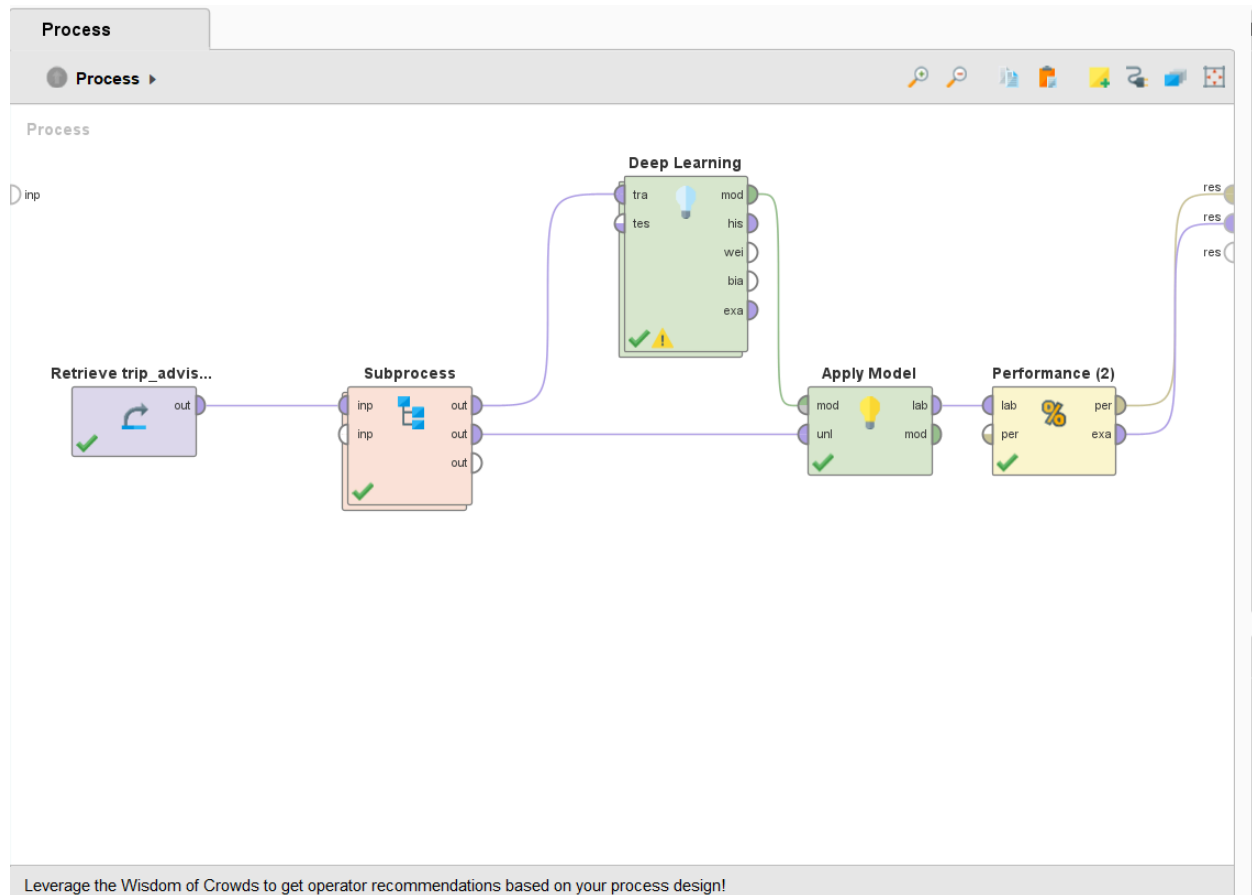

Part 2. Preprocessing the Data

Part 3(a): Ratings-based Model

Model Setup: Feedforward NN using numeric rating attributes.

Architecture: One hidden layer (32 ReLU neurons) + Softmax output layer (5 neurons).

Performance: Accuracy =75.25%; Runtime = few sec.

Set (Apply Model) PerformanceVector (Performance (2))

☒ Table View ☐ Plot View

accuracy: 75.25%

	true false	true true	class precision
pred. false	0	1	0.00%
pred. true	98	301	75.44%
class recall	0.00%	99.67%	

Interpretation: Moderate accuracy as numeric attributes capture partial context but miss review text sentiment nuances.

Part 3(b): Embedding-based Model

Model Setup: Feedforward NN using 384-dimensional embeddings.

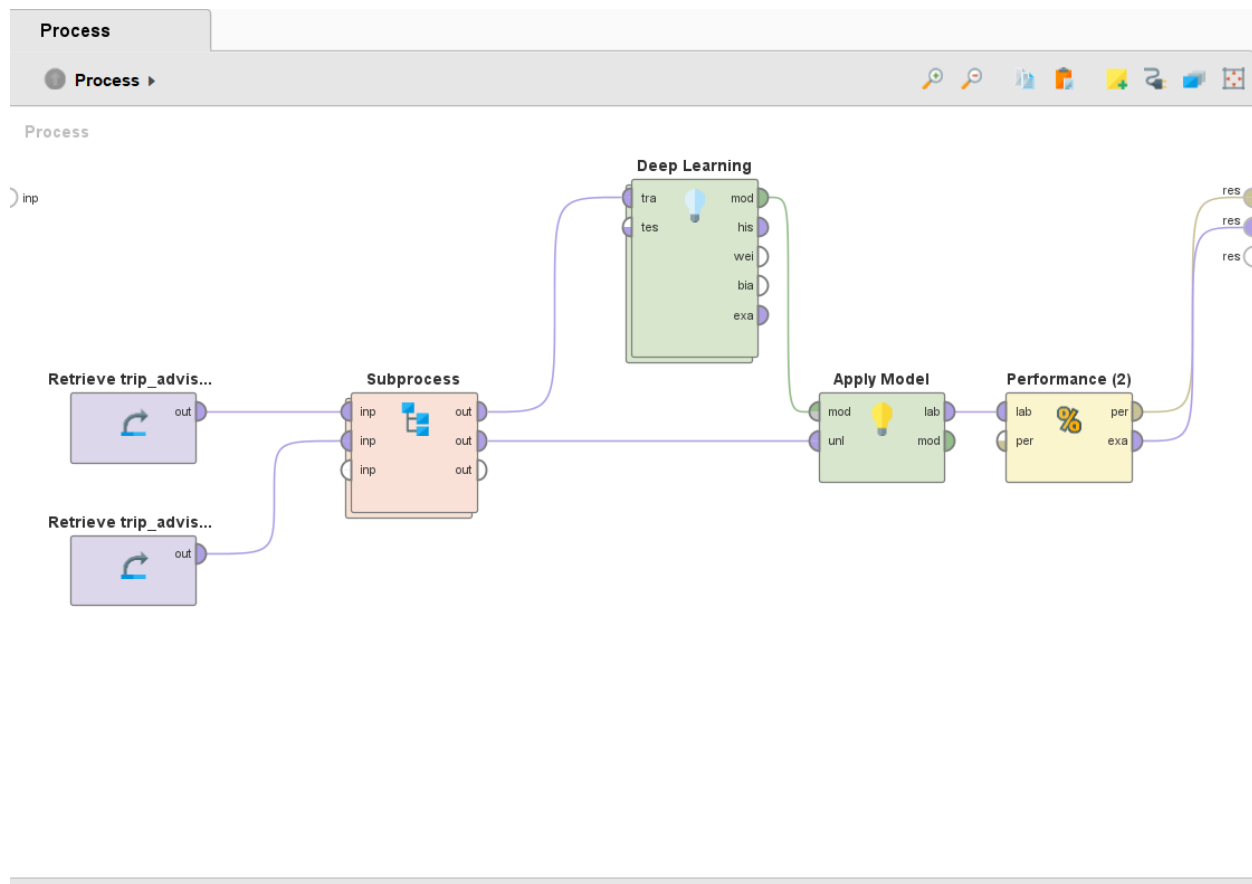

Performance: Accuracy = 46.5%; Runtime = within few seconds

Interpretation: Likely higher accuracy—embeddings capture textual nuance better than numeric ratings.

Part 3(c): Combined Model

Model Setup: Combined numeric + embedding features, 50 epochs, learning rate 0.001.

Performance: Accuracy = ____%; Runtime = ____ sec.

Set (Apply Model) PerformanceVector (Performance (2))

☒ Table View ☐ Plot View

accuracy: 49.00%

	true 1	true 4	true 5	true 2	true 3	class precision
pred. 1	5	2	1	1	1	50.00%
pred. 4	1	29	22	3	8	46.03%
pred. 5	8	87	153	14	34	51.69%
pred. 2	2	0	0	2	2	33.33%
pred. 3	5	3	6	4	7	28.00%
class recall	23.81%	23.97%	84.07%	8.33%	13.46%	

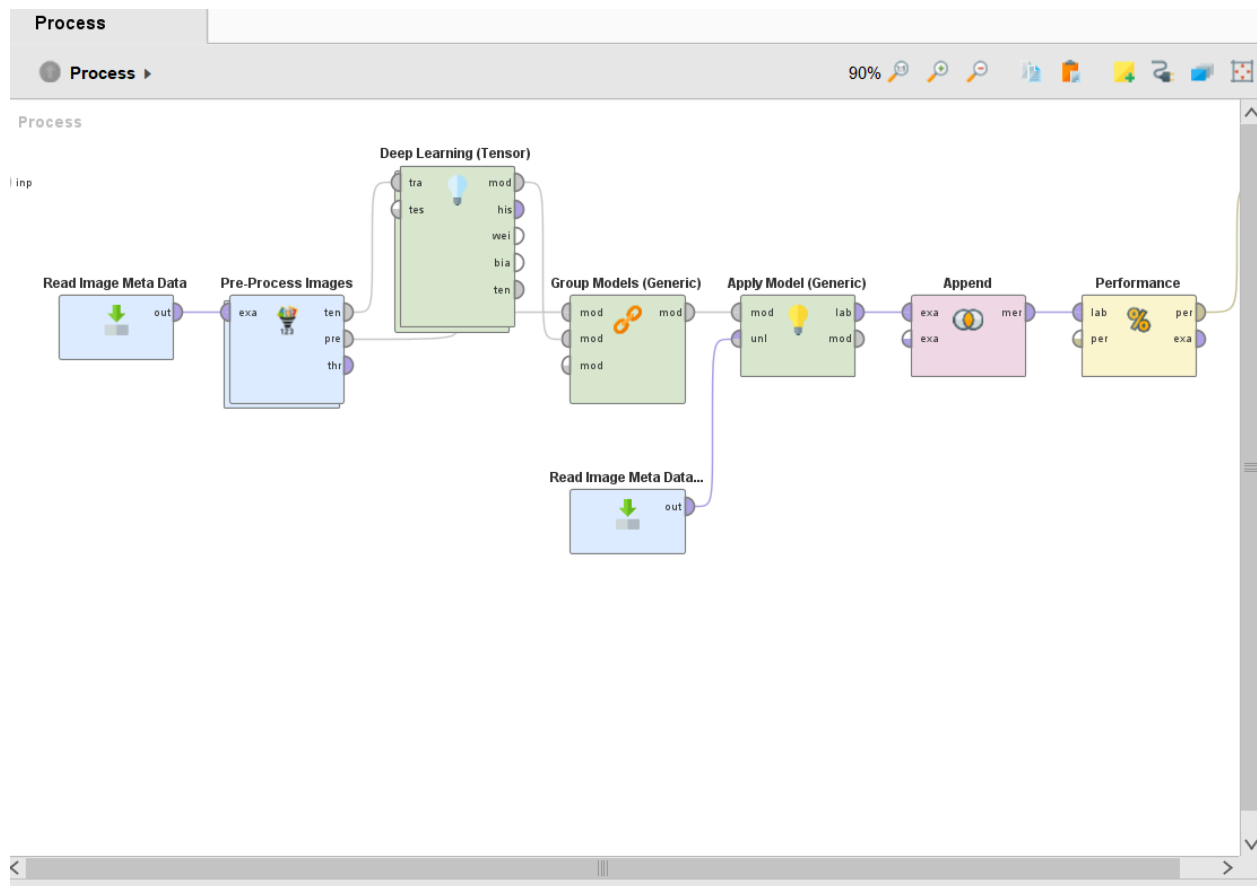

Interpretation: Best overall—combines quantitative and semantic insights.
Recommend this model for deployment.

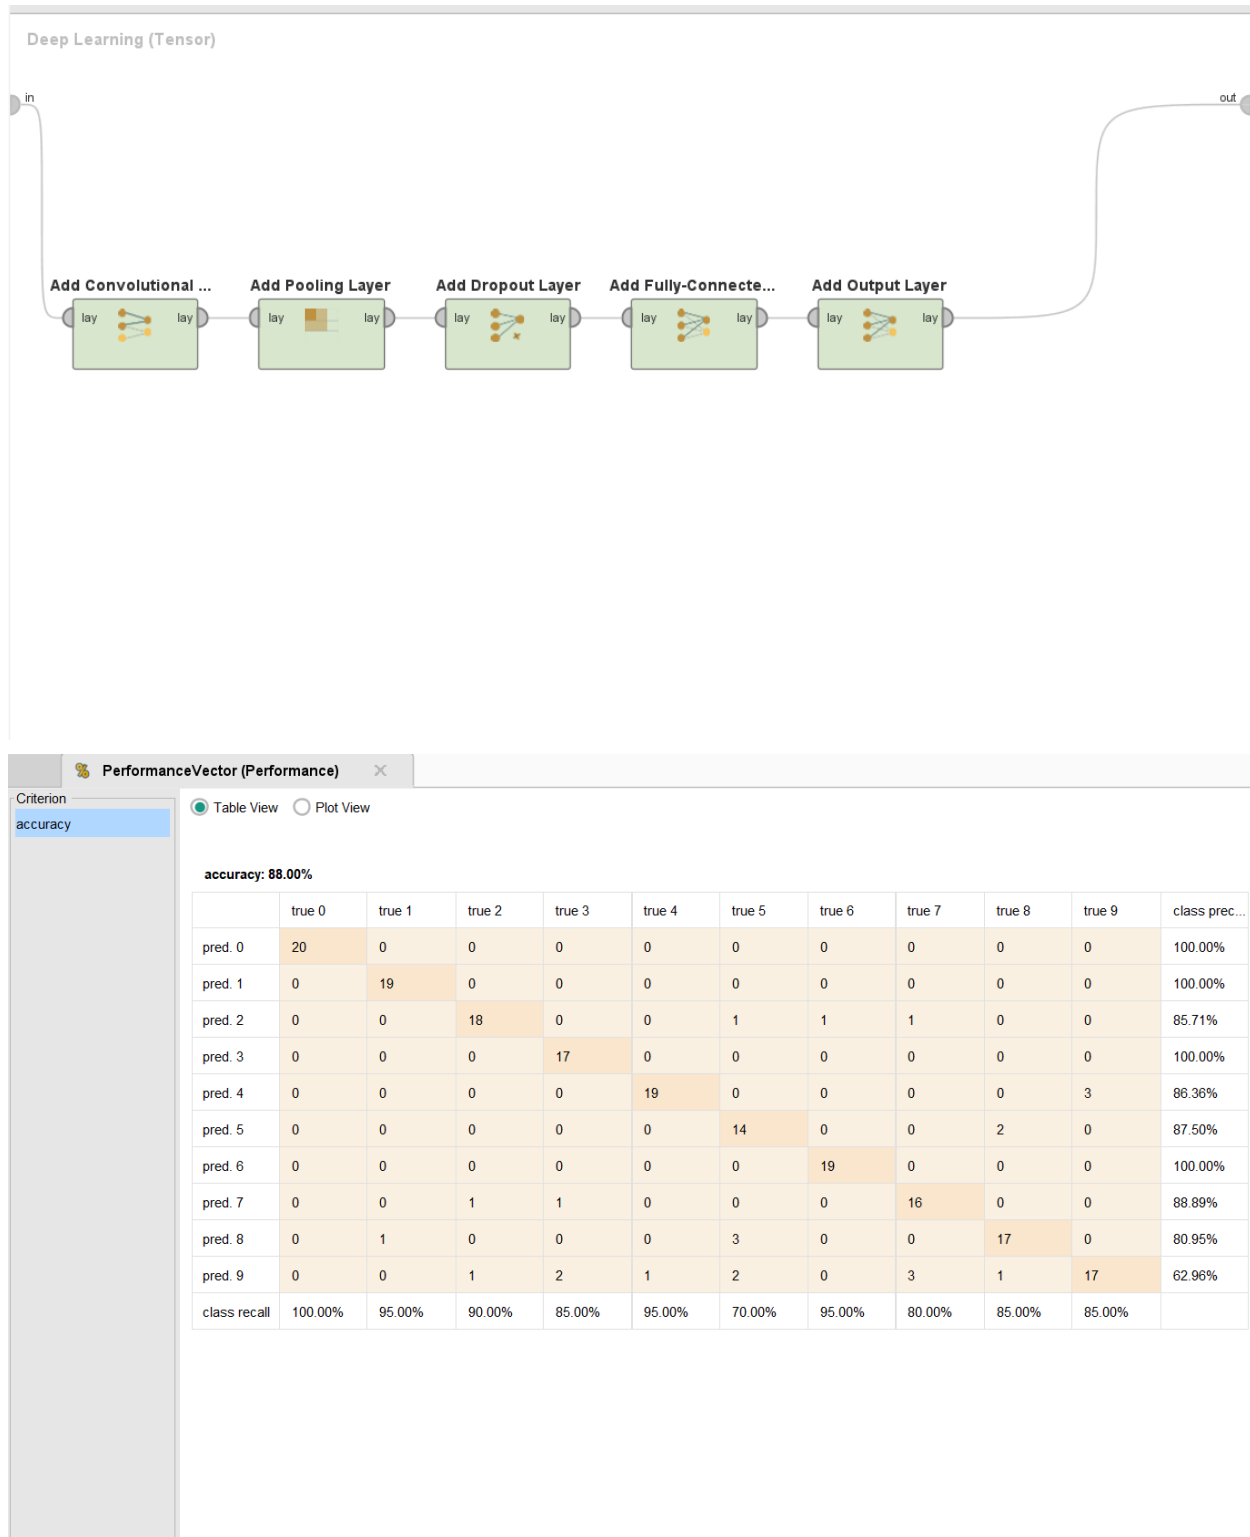

Model Recommendation

Chosen Model: Combined Model (Part 3c)

Reason: Achieves best accuracy and captures both textual and numerical dimensions of customer sentiment.

Part 4:

High accuracy of 88% and run time was only few seconds.
